

MANDAR DESHMUKH

SOFTWARE ENGINEER

+91 7030229908 | mandardeshmukh863@gmail.com | linkedin.com/in/mandardeshmukh8 | github.com/DMandar8 | mandardeshmukh.vercel.app

Summary

Full-stack Software Engineer with hands-on experience building production-grade MERN applications – secure authentication, role-based access control, real-time analytics dashboards, and REST APIs – alongside enterprise SQL engineering on a large-scale property-management platform at Yardi. Comfortable owning a feature end-to-end, from React front ends and Node.js/Express APIs to MySQL/Redis data layers and Docker-based deployment. Also brings applied AI engineering experience (LangChain, LangGraph, RAG) from building a full-stack document intelligence platform, adding an edge in integrating AI-driven features into web products.

Skills

Languages	JavaScript, Java, Python
Frontend	React.js, Tailwind, Bootstrap
Backend	Node.js, Express.js, FastAPI, REST APIs
Databases & Caching	MongoDB, MySQL, Redis, Qdrant
Cloud & DevOps	Docker, AWS ECS, AWS ECR, Git, GitHub, Postman
AI / GenAI (applied)	LangChain, LangGraph, RAG, Prompt Engineering, AI Agents, Pydantic

Experience

Yardi Software India Pvt Ltd – Software Engineer Trainee (On-Site) Jul 2026 – Present
SQL, Python, Backend Automation

- Building an internal knowledge-assistant tool to automate report generation and speed up SQL script development for implementation teams, applying backend engineering and API-style service design.
- Designing reusable SQL scripts and report-automation utilities for Yardi's reporting engine, improving reporting efficiency and data consistency across implementation workflows.
- Driving internal automation initiatives, evaluating and prototyping tooling to streamline reporting and implementation processes.

Yardi Software India Pvt Ltd – Software Engineer Intern (On-Site) Jan 2026 – June 2026
SQL, SQL Server Management Studio (SSMS), SQL Profiler

- Investigated and resolved production issues by analyzing client-reported issues, reproducing scenarios, and debugging enterprise SQL-based applications.
- Worked extensively with SQL Server, SQL Profiler, and complex multi-table queries to identify data inconsistencies and ship production fixes.
- Collaborated with implementation and product teams to validate business logic across enterprise property-management modules.

IT Sight – Software Development Intern (Remote) Jan 2025 – June 2025
MERN, PHP, MySQL, GitHub, Postman

- Developed and maintained full-stack web applications using the MERN stack and PHP, contributing to end-to-end feature development.
- Designed responsive UI components and built RESTful APIs, enhancing application performance and overall user experience.
- Worked within a collaborative code-review workflow, delivering production-ready code to shared repositories and supporting deployment pipelines.

Projects

Enterprise & Workforce Management System – TimeSep CRM Feb 2026 – May 2026
React, Node.js, Express.js, MySQL, Redis, Nodemailer

- Architected a full-stack MERN-style SaaS platform with dual-token JWT authentication (access + refresh tokens) and HTTP-only cookies, securing 10+ RESTful APIs against XSS and CSRF attacks.
- Implemented role-based access control (RBAC) with Redis-cached permissions (21+ permission types across 10 modules), reducing database round trips by 95% for authorization checks.
- Designed an invitation-based user onboarding flow with Nodemailer + Brevo SMTP, using responsive HTML email templates and 48-hour expiring tokens for secure account activation.
- Built real-time dashboard analytics aggregating ticket trends, leave requests, and employee activity metrics with React Chart.js, covering 5+ interactive visualization types.
- Optimized database queries with a Redis caching layer, achieving sub-10ms response times for 90% of API endpoints.

AI Document Intelligence Platform – DocMinr.ai | GitHub Link May 2026 – Present
Node.js, FastAPI, Python, LangChain/LangGraph, Qdrant, MySQL, Docker

- Architected a full-stack platform with a Node.js/Express backend and a dedicated Python FastAPI AI microservice communicating over an internal service API.
- Built a document management system with layered route-controller-service architecture supporting multi-file and ZIP-based bulk uploads (up to 500MB, recursive extraction, folder-structure preservation) into MySQL-backed knowledge bases.
- Implemented a document processing pipeline (PyMuPDF, python-docx) for PDF/DOCX/TXT text extraction, followed by configurable chunking and embedding generation indexed into Qdrant with metadata payloads.
- Assembled the end-to-end retrieval flow (query embedding → vector search → context-augmented prompt → LLM response) and containerized services with Docker for microservice-based deployment.
- Currently extending the system into a multi-agent architecture with LangGraph and multi-tier memory persisted in MongoDB.

Certification

Complete AI & LLM Engineering Bootcamp – Full Stack Generative & Agentic AI with Python (2026) View Certificate →
Python, LangChain, LangGraph, RAG, AI Agents, Prompt Engineering, OpenAI APIs, Docker, Neo4j, Ollama, Redis, AWS ECS/ECR, production LLM deployment.

Education

B.Tech, Computer Science & Engineering MGM's Jawaharlal Nehru Engineering College, Chh. Sambhajinagar, Maharashtra	2023 – 2026 CGPA: 8.41/10
Diploma in Computer Engineering MGM's Polytechnic College, Chh. Sambhajinagar, Maharashtra	2019 – 2022 76.80%
10th SSC Board Saint Xavier's High School, Chh. Sambhajinagar, Maharashtra	2018 – 2019 88.40%
